

Invest in the best for your family - State of the Art Water Filtration for your home.

## Ultra High Purity Reverse Osmosis System with Remineraliser and Alkaliser.

Handbuilt in Sydney with local, USA & UK components

Easy Maintenance with hygienic 'twist-off' cartridges

5 Year Warranty - handbuilt & wet tested before sale.

Purest Water Filtration Proudly presents state of the art technology in water purification - the ultra high purity reverse osmosis system with AlkaHydrate filter offers superior water filtration in a compact, undersink design.

The system efficiently removes all contaminants that are of concern to the consumer, such as chlorine, pesticides, fluoride & heavy metals. The additional 5th stage AlkaHydrate filter provides enhanced water that is both energised & mineralised. This unique filter features a series of different medias to effectively raise the pH level of your drinking water while introducing natural minerals such as calcium, magnesium, potassium and more.

Of all methods that purify drinking water for domestic use, the process of reverse osmosis is the most advanced, economical and effective

Ideally for those looking to reduce acidic toxic waste in the blood, tissues & fluids of the body, allowing it to adhere to a more alkaline state required by most human metabolic processes.

### Among the many contaminants removed:

Aluminium	Cryptosporidium
Iron	Potassium
Barium	E. coli
Lead	Radium
Cadmium	Fluoride
Manganese	Selenium
Chlorine	Giardia
Mercury	Sodium
Nitrate	Copper
Copper	PCB's

WaterMark  
Certificate  
No: 23124

The Australian WaterMark  
Standard Approval of this system  
is your guarantee of quality

### Specifications:

Item #	PWRO307
Output @ 60 PSI 25C	approx 200 litres /'day
System Dimensions (cm)	32 (w) x 42(H) x11(D)
Micron Rating	0.0005 micron

Warranty 5 years\*

### Twist-Off' cartridges

ensure a simple, hygienic, no mess means of system maintenance

## Ultra High Purity Reverse Osmosis System with Remineraliser and Alkaliser.

**How Does it Work?** Polluted water is forced by mains water pressure through the semi-permeable membrane. Pure water molecules easily pass through the membrane while pollutants, typically larger than the membrane pore size (0.0005 micron), cannot and are instead washed down the drain.

### 5 Stage Filtration Process

- 
**Sediment Pre-Filter** – Made in USA  
 – Mechanical filtration removes fine sediment particles.
- 
**Carbon Pre-Filter** – Made in USA  
 – Removes chlorine, pesticides, heavy metals, and other organic pollutants.
- 
**Ultrafine TFC RO Membrane** – Made in USA – Screens to 0.0005 micron, filtering viruses, bacteria, & parasites. Repels heavy metals and removes Fluoride and Hydrocarbons.
- 
**Coconut Carbon Post Filter**  
 – Made in USA, final polishing results in superb tasting, pure water
- 
**AlkaHydrate Filter** – Made in USA  
 – Alkalising and mineralising filter – effectively raises pH levels and lowers ORP (oxygen reduction potential)

**\*We Include a faucet to match your tapwear with every system we install\***

### About the Alkahydrate Filter Cartridge – Cleaner, Fresher & Healthier Water.

#### Raises pH Level

A series of different medias are used to effectively raise the pH level of your drinking water. Alkaline water helps our body dissolve and dispose of acid wastes naturally

#### Adds Natural Minerals

Introduces natural, ionic minerals such as calcium, magnesium potassium and more. These are absorbed by the body to improve strength and function of body processes

#### Lowers ORP

Significantly increases the negative ORP (oxygen reduction potential) enabling it to decrease the oxidation of substance or cells, thus serving as a potent anti oxidant.
